# RightFax Encryption Module

Information security remains one of the most significant concerns for organizations worldwide. Internal breaches and external threats plague all businesses, but those that exchange protected, confidential and private information are particularly at risk. The extra layer of protection provided by the RightFax Encryption Module adds even more security to a RightFax fax server implementation.

User → Document → Integration Module → RightFax Server → Fax → Failure / Success → Encryption Module → Image Directory Folder

With the Encryption Module, access to encrypted images is only allowed from the RightFax client through the RightFax API, and a full audit trail is collected.

Encrypt Faxes at Rest
Add a layer of protection for fax images by encrypting all fax images at rest while they are stored in the RightFax Image Directory or SQL Image Storage Module. This module adds a layer of security by preventing any unauthorized viewing of fax images in the RightFax Image Directory structure.

Improved Compliance
With AES 256-bit security, your fax images are encrypted at rest to satisfy information security or regulatory requirements HIPAA or PCI-DSS.

Prevent Unauthorized Access
Encrypting data at rest can protect your organization from unauthorized access to data from anyone who has permissions and the ability to bypass the full audit capabilities of RightFax. While RightFax provides a full audit trail, RightFax can only audit access of faxes if they are viewed through the system.

Upgrade with Advantage Professional Services

Project Planning
- Document Integrations
- Propose Design Improvements
- Develop Project Plan

New Install & Migration
- Fresh Installation
- System Configuration
- Migration of Exsiting Users and Faxes

User Acceptance Testing
- Test Fax All Integrations
- Resolve Any Issues
- Client Approval to Schedule Cutover

System Cutover
- Scheduled Outage
- Limit System Downtime
- Simple Rollback Path

Trust your RightFax upgrade to a Certified ASP Support Partner. Advantage Technologies can provide you with the peace of mind to know that all avenues are open, should you run into a problem during your upgrade.

ADVANTAGE
TECHNOLOGIES

Advantage Technologies is the proven leader for RightFax support and professional services. We are one of the few OpenText partners that has maintained the high standards necessary to be recognized as a RightFax Authorized Support Provider (ASP). Our Professional Services team's track records speak for itself:

- 21+ Years of Experience
- Over 1,000 Successful RightFax Implementations
- OpenText Certified Senior RightFax Engineers
- Proven Implementation Planning and Execution Processes

Choose Advantage Technologies as your RightFax support partner and trust our Professional Services team with all your RightFax installations and upgrades to ensure that your project is a success.
